To the Editors of the Chrnicle: As the trees are beginning to put on their autumn dress, it will doubtless interest many of your readers to learn a good way of preserving the brightly colored leaves. Heat a common flatiron to the degree common in ironing clothes; set it on a cake of beeswax. until the latter begins to melt and adthe wax, so as to keep out moisture, and prevent decay and change of color. If the leaves should not be pretty dry already, they would doubtless be im proved by ironing dry before applying the wax. Clusters of leaves can thus be preserved, in more natural positions H. L.
